

Wrangle Report

The gather phase of the project was done in the following steps: I read the file 'kiva_loans.csv' into a dataframe called "df". This csv file can be found at the following link: <https://www.kaggle.com/kiva/data-science-for-good-kiva-crowdfunding>.

The assess and clean phases of the project were done in the following steps: I used the 'fillna' function twice. The first time i used 'ffill' limit 1. The second time i used 'bfill' limit 1. The purpose of this was to fill in most of the missing data. What was left after this I found to be acceptable and left it alone. For the second assessment, I found that some of the sentences in the 'use' column did not begin with capital letters. I used the 'capitalize' function to correct this. I then wrote the cleaned dataframe into a csv file called 'kiva_loans_master.csv'.
